

**TenPilot automation** is the perfect solution for sectional and tilt-up garage doors, which will ensure safety and convenience of everyday use. Thanks to advanced technical parameters, the gate opens quietly and smoothly. UNIVERSAL, PRO, ECO drives fit to the most gate models on the market. A varied range of drives will allow you to choose the right drive for your needs.

Our drives are equipped with a large number of additional functions: regulation of overload and speed, lighting, automatic setting of the opening and closing force, setting the maximum number of programmed remote controls or maintenance signaling. The drives also have an overload system, thanks to which the gate stops or reverses, sensing an obstacle.

*Use : tilt-up door, sectional door.*

## DRIVES

### ~ Speed variants

For busy ones - drives in the speed variant which will save time and not overstrain the patience of the driver.

### ~ Bi-directionality

Most drives have a feedback communication function that will show you a signal about the activity performed and you can check the position of the gate at any time.

## RAILS

### ~ Belt or chain?

A wide range of rails will allow you to precisely define the needs and choose the gate not only by the technical parameters, but also with its purpose: a quiet rail with a belt or perhaps a more durable rail with a chain.

## CONTROLS

### ~ Key-ring remote controls

Key-rings can be easily attached to your keys. In a quick and convenient way you can open the entrance and garage gate.

### ~ Car remote controls

Thanks to the special clip, the remote control can be placed on the solar shield. You always know where your transmitter's place is - at your fingertips.

### ~ Wall-mounted remotes

A remote control with a keyboard allows you to open the gate with your individual code. This solution will allow you to program the drive with a code known only to you and your loved ones.

3-channel TP02 key ring remote control with status feedback

2-channel TP05 car remote control

Signal lamp

2-channel TP11 wall-mounted remote control

## ACCESSORIES

### ~ Photocells

Additional gate equipment with photocells will give you certainty that your gate will stop automatically when it encounters an obstacle. It will not allow the gate to collide, e.g. with a child playing in the driveway. By choosing this type of sensor in the entrance light, we gain safety for our loved ones, the car, the gate, as well as other things that could be damaged.

### ~ Signal lamp

The lamp will signal when the gate closes and opens, which ensures greater safety during the day and at night. This is a very useful device, especially in places with increased traffic or low visibility.

### ~ Control units

Thanks to the control unit, you can connect an automated entrance gate with a garage door and control them with one remote control.
